COMPANY

About Ultimate

Ultimate Tracking Limited is a registered and licensed Ugandan telematics company. We tailor vehicle tracking, fleet management, fuel monitoring and home security systems to the needs of individuals and organisations.

Our team has over five years of experience in fleet administration and ICT solutions across Africa. We combine GPS hardware with subscription software to help clients control operating costs and improve profitability.

Every package includes customer support and training for drivers, fleet staff and executives.

Our mission

To deliver cutting-edge security solutions, prioritize customer success, and drive community growth through innovation and excellence.

Our vision

Empowering Africa’s future with innovative, cost-effective tech solutions that secure assets, delight customers, and build thriving communities.

Our values

Professionalism, hard work, respect, accountability, innovation, and honesty and integrity.

SERVICES

Which package fits your needs?

UTrack

Where is my vehicle?

Locate the vehicle on your phone or browser. Replay trips, receive movement alerts and review mileage and parking reports.

UFleet

How is our fleet being used?

Adds service reminders and driver behaviour reports. Plan maintenance and follow up on speeding or idling.

UFMS

What happened to the fuel?

Adds tank-level monitoring to UFleet. Verify fuel deliveries, investigate drops and compare fuel use across similar assets.

Need tracking, driver oversight and fuel monitoring together?

Choose UFMS for an equipped vehicle. Match each refill or fuel drop to the trip, location and time. All three packages include customer care and training.

UTRACK

Vehicle tracking

Locate a vehicle

Check its live location on the mobile app or web. Replay a trip to confirm the route, stops and arrival time before responding to a customer.

Respond to movement

Receive ignition, speeding and night-driving alerts. Set a geofence around a yard or branch to see when a vehicle enters or leaves.

Review use and limit access

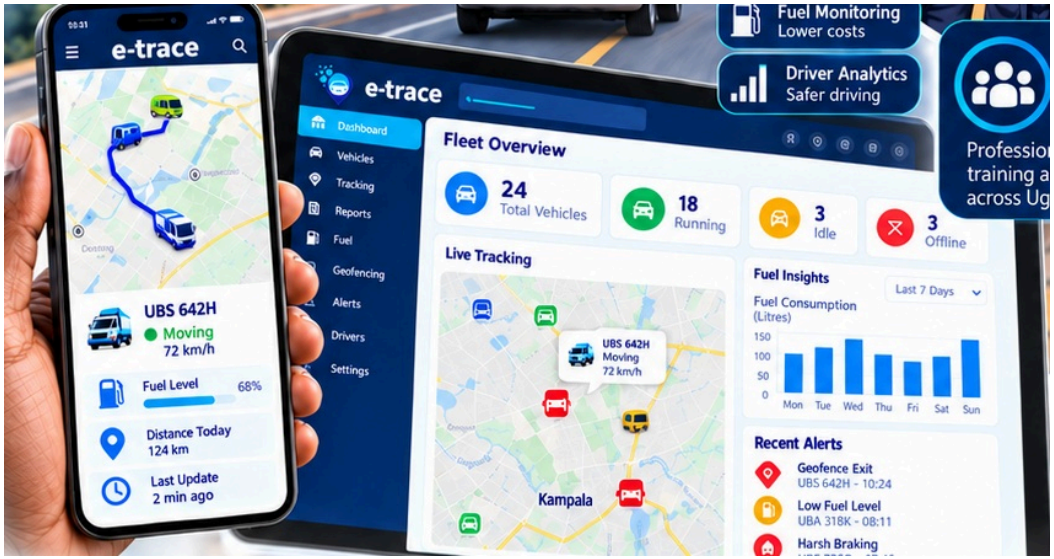

Email mileage, parking and speeding reports. Authorised users can remotely stop and restore the engine with compatible hardware and an agreed safe-use procedure.

95.9% recovery rate

UFLEET

Fleet management

UFleet includes UTrack and adds driver behaviour reports and service alerts. Use trip records to allocate work, coach drivers and schedule maintenance before a service falls overdue.

Smartphone and tablet fleet views

Illustrative dashboard from the product brochure.

Vehicle workload

Compare trips, mileage and available running hours across similar assignments before moving work.

Driver follow-up

Review the route, speeding and idling events with the driver assigned to the trip.

Service planning

Check recorded mileage against service intervals. Confirm the workshop record and book the service.

Shared vehicles Optional driver ID links activity to a person. Where it is unavailable, match the trip time and vehicle to the duty roster.

UFMS

Fuel monitoring for vehicles and generators

UFMS adds fuel monitoring to UFleet. A virtual fuel gauge and app or email alerts help you check deliveries, investigate sudden drops and compare fuel use by distance or generator running time.

Verify a refill

Match the recorded increase in litres to the delivery note or receipt. Check the asset, time and quantity.

Investigate a drop

Review the readings before and after the event, vehicle activity and any authorised fuel transfer.

Compare consumption

Use litres per 100 km for vehicles on similar routes. For generators, use litres per operating hour where hours are recorded.

Reading a fuel report

Tank shape and calibration affect the recorded volume. Check that fuel readings and distance or running hours cover the same period.

Flag gaps in the readings before drawing conclusions about consumption or loss.

UFMS TARGET **SAVE 25% ON OVERALL FUEL EXPENSES QUARTERLY**

AI VIDEO TELEMATICS

Dashcam technology

A road-facing camera shows what happened ahead of the vehicle. A driver-facing camera adds context when a supervisor reviews a driving alert.

Road and cabin views · illustrative configuration

Road-facing alerts

Compatible cameras can warn of lane departure or a potential forward collision.

In-cab alerts

Depending on the model, the system can flag signs of fatigue, phone use, smoking or an unfastened seat belt.

From alert to coaching

Match the event time to the trip, review the available footage and discuss the circumstances with the driver. Camera views and alert types are agreed during configuration.

REPORTING & ANALYTICS

AI-powered reports

For camera-equipped fleets, AI can highlight driving events that deserve a supervisor's attention. The trip record and available footage give each flag context.

DRIVER-RISK REVIEW

Example of a weekly review

Flagged event	The dashcam flags possible phone use during a delivery.
Evidence to check	Review the clip, event time and trip. Confirm who was driving.
Supervisor follow-up	Record whether the flag was confirmed, agree a coaching action and review any recurrence next week.

Alongside the AI review, use UFleet mileage and idling reports or UFMS fuel records to investigate operational questions. Available reports depend on the equipment and subscription.

DATA PROTECTION

Cyber Safe System

A fleet platform can reveal where a driver has been, who was behind the wheel and what happened inside the cab. Access decisions matter from the first installation.

Vehicle locations

Agree which staff may see individual vehicles, branches and trip histories. Review the access list when staff change roles or leave.

Video and reports

Identify who may view clips, receive emailed reports and share incident records. Agree how long to retain footage for the purpose at hand.

Remote commands

Name the people authorised to request engine stop or restore. Agree how requests are verified and when the command can be used safely.

Personal Data Protection Office registration

Ultimate Tracking Limited is registered as a data collector, processor and controller. A copy of the registration certificate appears on page 14.

ELECTRONIC ASSETS & MOTORCYCLES

Tracking beyond the fleet

e-trace for electronics

Track selected laptops, desktops, smart TVs, projectors, sound systems and refrigerators. A device list and movement alerts help a home, school or office identify which item needs attention.

Londoola LifeTrack

For motorcycle owners, live location, route playback and on-demand trip reports help explain where a bike has been. Configure alerts for speeding, ignition changes and night driving.

For LifeTrack, a SIM is supplied and the client funds monthly airtime and data. For e-trace, confirm that each item can accommodate the tracking hardware.

HARDWARE & CONNECTIVITY

Accessories for the job

Select accessories by the event you need to detect, the signal the vehicle can provide and the person who needs to act.

Car alarm

An audible alarm draws attention to a disturbance at the vehicle.

Panic button

Give drivers a discreet way to request help from a designated contact.

Cold-chain sensor

Monitor cargo temperature and flag readings outside agreed limits.

CAN-bus reader

Read supported vehicle signals through a compatible interface.

Driver identity system

Link a trip to the driver who signed in on a shared vehicle.

Roaming IoT SIM

Support cross-border reporting on available partner networks.

Buzzer

Give an audible in-cab warning when a configured event occurs.

For mixed fleets, test the required signals on a representative vehicle before rollout.

DELIVERY AND SUPPORT

From installation to handover

When you need support

Share the plate or asset ID, the issue and the time you observed it. We review the records and coordinate a site visit when required.

01 Assessment

We confirm the assets, operating locations and reports you need.

02 Configuration

We agree on hardware, users, alerts and subscription terms in the quotation.

03 Installation and testing

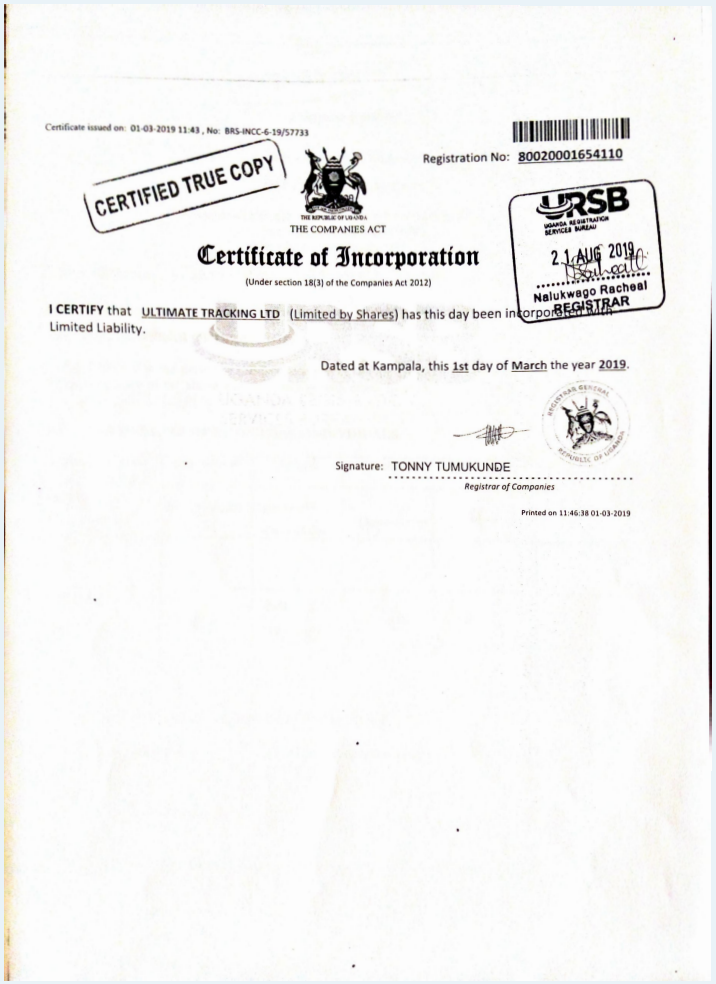

We fit the equipment, test the agreed functions and calibrate fuel sensors to the tank.

04 Handover

We show drivers, fleet staff and managers how to use the system and record items for follow-up.
